

**Steven Street,**  
**Technical Director, Ontario Wood *WORKS!***

Steven joined the Wood *WORKS!* team in 2007 after a career in off-site panelisation and prefabrication. In his role as Technical Director, he provides information and technical support to design professionals, helping facilitate the increased use of wood products in commercial, industrial and institutional construction. Steven is actively involved in numerous key Canadian market development programs including Cross-Laminated Timber and the role wood plays in Mid-rise construction. He guest lectures at many Colleges and Universities on wood and wood use and is a regularly invited speaker at technical events presented by the OBOA, OWTFA, and the Canadian Wood Council.

Wood *WORKS!* is a national campaign to increase the use of wood in commercial, industrial and institutional construction. The Canadian Wood Council leads this project with funding support from the wood industry, the federal government and provincial governments across Canada. Wood *WORKS!* Ontario creates opportunities for wood products by providing education, resources and technical support related to designing and building with wood.
