Seminar Agenda:

Mid-rise Challenges and Engineered Lumber Solutions

Andy Teasell, P.Eng, Weyerhaeuser

Acoustic Considerations for Wood Frame Construction

Russ Lewis, M.Eng, P.Eng,
Senior Consultant, Rowan Williams
Davies & Irwin Inc.

An Overview of Proper Costing Strategies for Wood Construction

Renaud Francoeur, PQS, Owner,
QS Online Cost Consultants Inc.

Opportunities in Mid-rise Construction:

There is a reason why 95% of the non-residential and multifamily construction market is built of concrete and steel; professionals have the perception that wood construction costs more, acoustic performance is poor and there are many engineering challenges (especially with 6 storey wood buildings).

The goal of this seminar series is to address these perceptions to prove that is exactly what they are, perception and not fact.
